

Chapter 3 of Heinsohn & Cimbala: Useful Figures and Tables

John M. Cimbala, Penn State University. Latest update: 12 September 2018

Figure 3.29 (corrected) Relationship between sound pressure, sound pressure level, and sound power, and some common sources of noise (adapted from US NIOSH, 1973).

Table 3.5 ACGIH and OSHA noise limit standards for the workplace (from Internet websites and US Office of the Federal Register, 1988).

| sound intensity (dBA) | ACGIH exposure time (hr) | OSHA exposure time (hr) |
|-----------------------|--------------------------|-------------------------|
| 80 | 24 | 32 |
| 82 | 16 | 24.3 |
| 85 | 8 | 16 |
| 88 | 4 | 10.6 |
| 90 | - | 8 |
| 91 | 2 | 7 |
| 92 | - | 6 |
| 94 | 1 | 4.6 |
| 95 | - | 4 |
| 97 | 0.5 | 3 |
| 100 | 0.25 | 2 |
| 102 | - | 1.5 |
| 105 | - | 1 |
| 110 | - | 0.5 |
| 115 | - | 0.25 or less |

Table 3.6 Metabolic rate \dot{M} as a function of physical activity for a 70 kg adult man (abstracted from ASHRAE, 1997). [Basal row added by J. Cimbalá.]

| activity | \dot{M} = metabolic rate (W) | \dot{M} = metabolic rate (kcal/hr) |
|---------------------------------------|--------------------------------------|---|
| sleeping | 72 | 62 |
| basal (lying down, not asleep) | 84 | 72.2 |
| seated, quiet | 108 | 93 |
| standing, relaxed | 126 | 108 |
| walking about the office | 180 | 155 |
| seated, heavy limb movement | 234 | 201 |
| flying a combat aircraft | 252 | 217 |
| walking on level surface at 1.2 m/s | 270 | 232 |
| housecleaning | 284 | 244 |
| driving a heavy vehicle | 333 | 286 |
| calisthenics/exercise | 369 | 317 |
| heavy machine work | 423 | 364 |
| handling 50-kg bags | 423 | 364 |
| playing tennis | 432 | 372 |
| playing basketball | 657 | 565 |
| heavy exercise | 900 | 774 |

Table 3.8 Heat stress index (adapted from ASHRAE, 1997). (from H&C textbook)

| HSI (%) | consequence of 8-hr exposure |
|----------------|--|
| < 0 | Indicates varying degrees of stress due to hypothermia. |
| 0 | No thermal strain. |
| 10-30 | <u>Mild to moderate</u> heat stress. Manual dexterity and mental alertness may suffer but there is little impairment to perform heavy work. |
| 40-60 | <u>Severe</u> heat stress. Health may be threatened unless physically fit. This condition should be avoided by people with cardiovascular or respiratory impairment or chronic dermatitis. |
| 70-90 | <u>Very severe</u> heat stress. Only specially selected people are capable of sustaining these conditions for 8 hrs. Special care must be taken to replace water and salt. |
| 100 | <u>Maximum</u> heat stress. Only acclimated, physically fit young people can withstand this for 8-hrs. |
| >100 | Indicates varying degrees of stress due to hyperthermia. |

Table 3.9 Comparison of the three odor thresholds for some common petrochemicals (abstracted from Hellman and Small, 1974).

| chemical | odor quality | detection (PPM) | 50% recognition (PPM) | 100% recognition (PPM) |
|---------------------|---------------------|-----------------|-----------------------|------------------------|
| acetone | sweet, fruity | 20.0 | 32.5 | 140 |
| acrylic acid | rancid, sweet | 0.094 | 1.04 | 1.04 |
| amyl alcohol | sweet | 0.12 | 1.0 | 1.0 |
| n-butanol | rancid, sweet | 0.30 | 1.0 | 2.0 |
| 2-butanol | sweet | 0.12 | 0.41 | 0.56 |
| butyl acetate | sweet, ester | 0.006 | 0.037 | 0.037 |
| n-butyl chloride | pungent | 8.82 | 13.3 | 16.7 |
| n-butyl ether | fruity, sweet | 0.07 | 0.24 | 0.47 |
| carbitol acetate | sweet | 0.026 | 0.157 | 0.263 |
| cyclohexanone | sweet, sharp | 0.12 | 0.12 | 0.24 |
| diacetone alcohol | sweet | 0.28 | 1.1 | 1.7 |
| diethylamine | musty, fishy, amine | 0.02 | 0.06 | 0.06 |
| ethyl acetate | sweet, ester | 6.3 | 13.2 | 13.2 |
| ethyl acrylate | sour, pungent | 0.0002 | 0.00030 | 0.00036 |
| ethylene | olefinic | 260 | 400 | 700 |
| ethylene oxide | sweet, olefinic | 260 | 500 | 500 |
| 1-hexanol | sweet, alcohol | 0.01 | 0.09 | 0.09 |
| isobutanol | sweet, musty | 0.68 | 1.80 | 2.05 |
| isobutyl acetate | sweet, ester | 0.35 | 0.50 | 0.50 |
| methanol | sour, sharp | 4.26 | 53.3 | 53.3 |
| methyl amyl acetate | sweet, ester | < 0.07 | 0.23 | 0.40 |
| methyl amyl alcohol | sweet, alcohol | 0.33 | 0.52 | 0.52 |
| 2-methyl butanol | sour, sharp | 0.04 | 0.23 | 0.23 |
| methyl ethyl ketone | sweet, sharp | 2.0 | 5.5 | 6.0 |
| n-propanol | sweet, alcohol | < 0.03 | 0.08 | 0.13 |
| propylene | aromatic | 22.5 | 67.6 | 67.6 |
| styrene | sharp, sweet | 0.05 | 0.15 | 0.15 |
| toluene | sour, burnt | 0.17 | 1.74 | 1.74 |
| vinyl acetate | sour, sharp | 0.12 | 0.40 | 0.55 |
| xylene (o-xylene) | sweet | 0.08 | 0.27 | 0.27 |

Table 3.10 Comparison of odor recognition threshold and OSHA PEL for various chemicals (maximum value of odor threshold to two significant digits, abstracted from Appendix A.20). (from Heinsohn-Cimbala textbook)

| material | odor recognition threshold (PPM) | PEL (PPM) |
|---------------------|---|------------------|
| n-butyl acetate | 20. | 150 |
| n-butyl mercaptan | 9.0×10^{-4} | 10 |
| carbon monoxide | no odor | 50 |
| ethylene oxide | 780 | 1 |
| hydrogen cyanide | 4.5 | 10 |
| methyl alcohol | 20,000 | 200 |
| methyl bromide | 1,000 | 5 |
| methyl formate | 2,800 | 100 |
| methyl methacrylate | 0.34 | 100 |
| methylene chloride | 620 | 25 |
| nickel carbonyl | 30. | 0.001 |
| triethylamine | 0.27 | 25 |
| xylidene | 0.0049 | 5 |
